GIFTS 2023

100 % BIODEGRADABLE

In contrast to synthetic fibers, wool is a natural and renewable resource. When wool is disposed of, it will decompose and release valuable nutrients back into the earth within a matter of months.

ECO WOOL

Eco wool means that the breeding and handling of wool must meet specific requirements. No trace of pesticides are allowed in the wool. The animals must be given only natural food and the use of antibiotics is strictly regulated.

KUST

Do you know which hands your
products have passed through?
We do.

Our throws are manufactured
from start to finish in our own
oeko-tex® certified factory.
We spin, dye and weave without
intermediaries.
